

FLEXTRAIL™

Introducing one of FlexGround's newest innovations, FlexTrail. It combines the flexibility of poured-in-place rubber surfacing with the durability of a bonded stone surface. The result is a highly aesthetic, wear-resistant surface engineered for use in high-traffic areas.

Perfect For:

- Walking Trails
- Bike Paths
- Elevated Decking
- Patios
- Pool Decks
- Livable Rooftops
- Golf Cart Paths

FlexTrail can be installed directly over top of existing surfaces with little or no excavation required. Tired of bird baths and puddles forming on or around your existing surface? FlexTrail can be laid at varying depths to assist with retaining and holding water so that it can dissipate over time, without jeopardizing the safety of pedestrians.

*Look and texture may vary based on local rock.
